Design thinking

User interviews

Through conducting in-depth user interviews with **3 participants**, we were able to identify **pain points** that would help us in creating our final solution.

Accessibility

I always thought that I'd have to go see my doctor who would then send me off to go see a bunch of different specialists.

Susan, 47
Registered Social Worker

Easy-of-use

I'm not the most technologically advanced person. I can get by using simple features of a mobile phone but need help with certain things.

Larry, 66
Retired, ex-teacher

Awareness

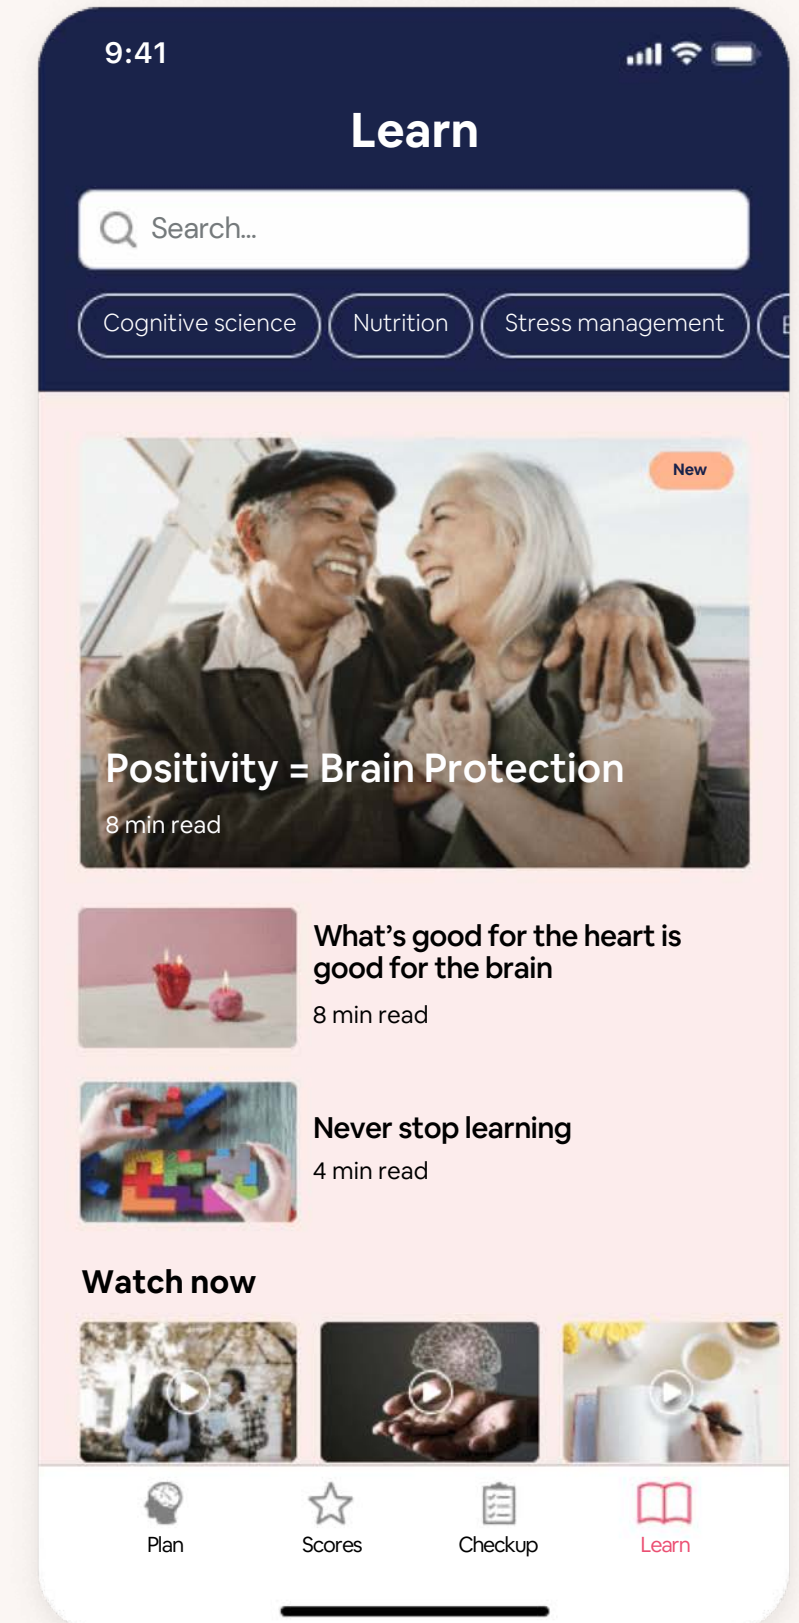

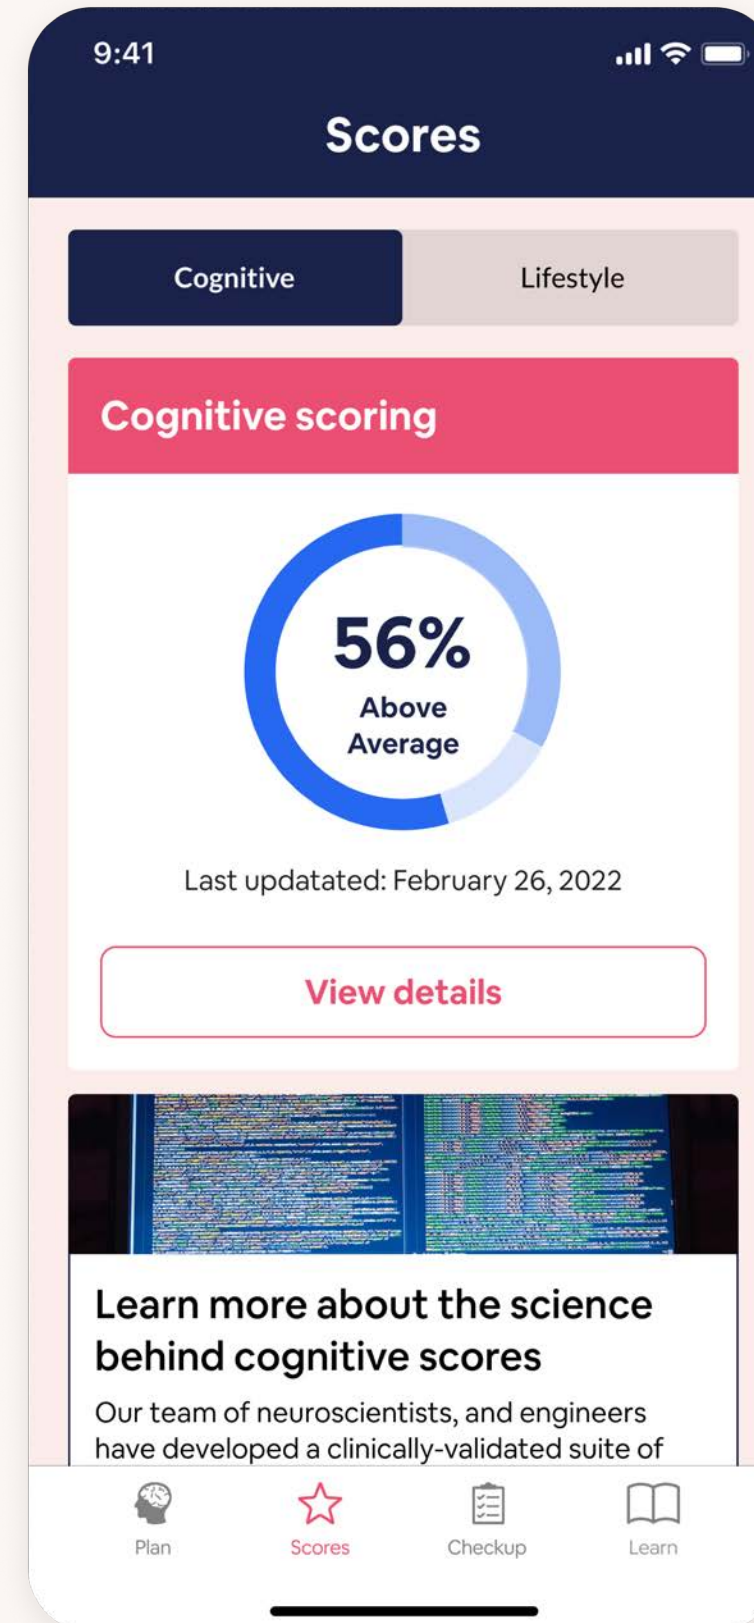

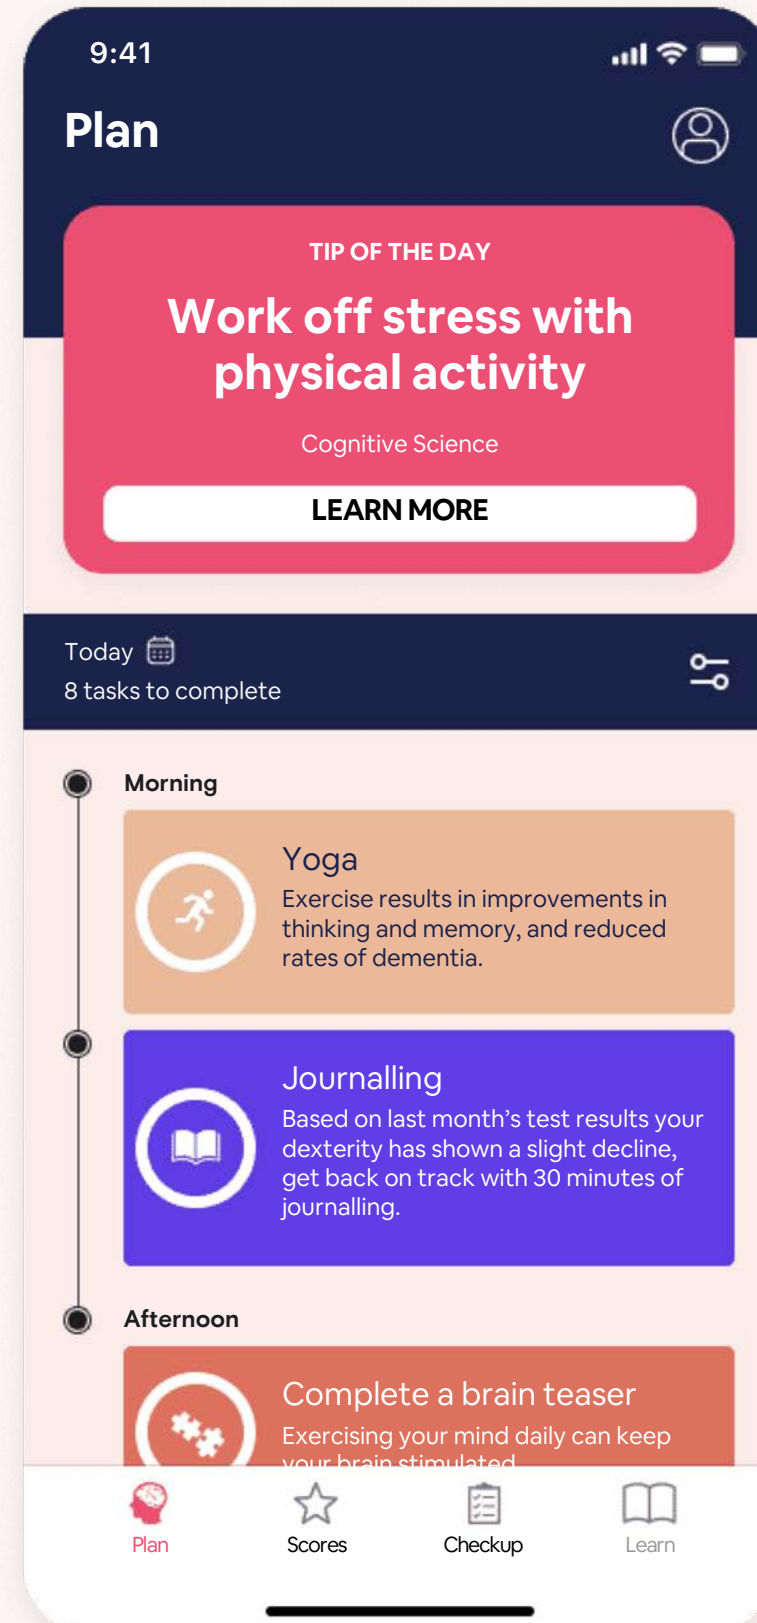

I didn't even know that someone as young as me could get Alzheimer's or that there are preventative measures I could be taking.

Michelle, 34
Marketing Manager

Building an MVP

Building an MVP

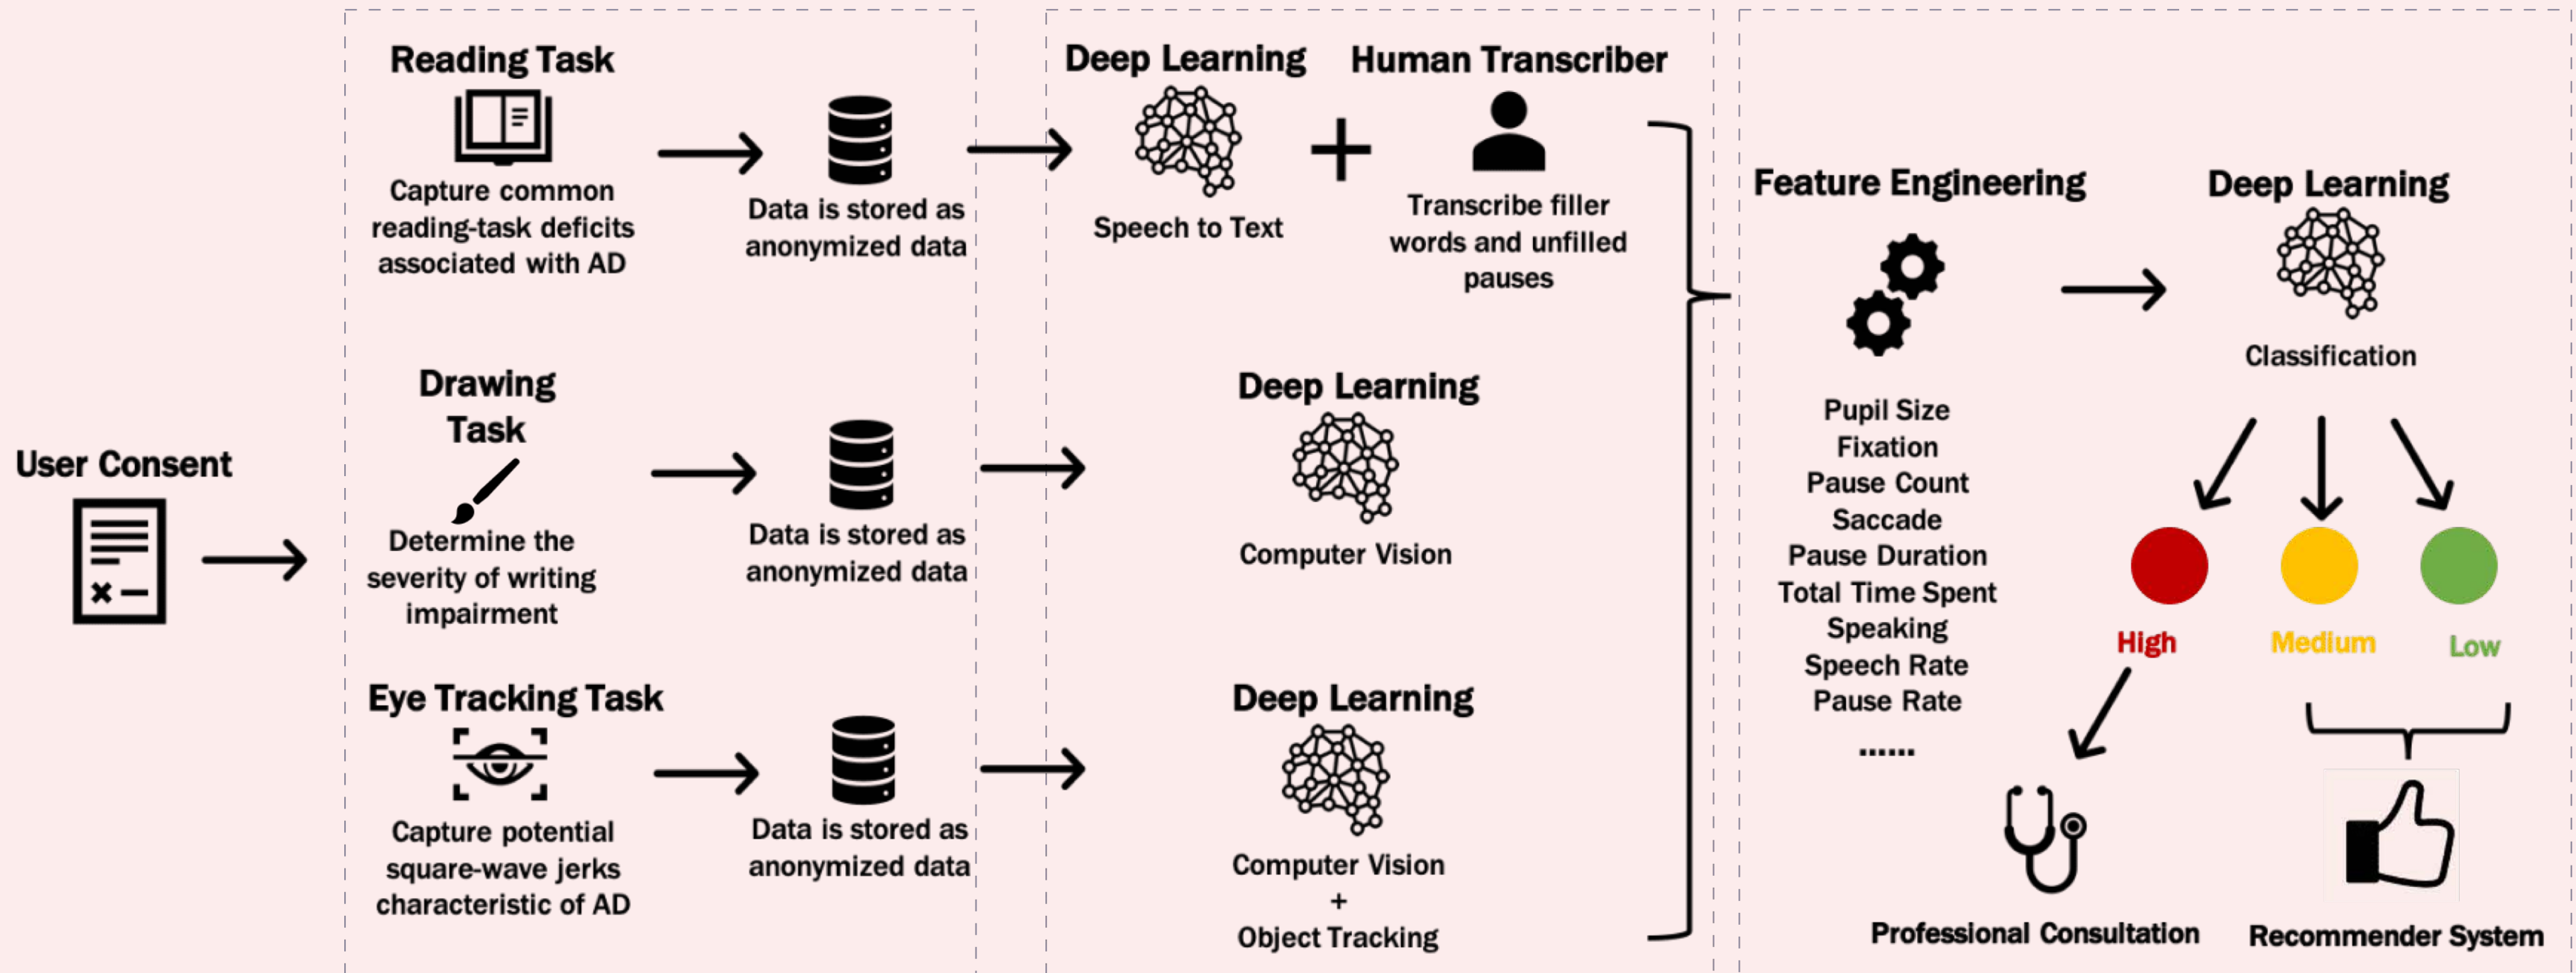

Data journey

Data collection

Data preprocessing

Modelling

Product roadmap

Prototype

Proof of concept

Target date: Q2'2022

- ◆ Build a proof of concept that leverages AI with digital biomarkers – eye movement, dexterity, and audio to diagnose Alzheimer's disease

MVP

Support early diagnosis of Alzheimer's

Target date: Q3'2022

- ◆ Digital mobile app (iOS, Android) roll out to limited users
- ◆ Product with enough features to meet early detection of Alzheimer's disease and get user feedback

Core-product

Customer subscription & enhanced features

Target date: Q1'2023

- ◆ Partnerships with “Memory and Brain Health Program”
- ◆ Incorporate user experience issues and feedback
- ◆ Integrate with voice assistance apps

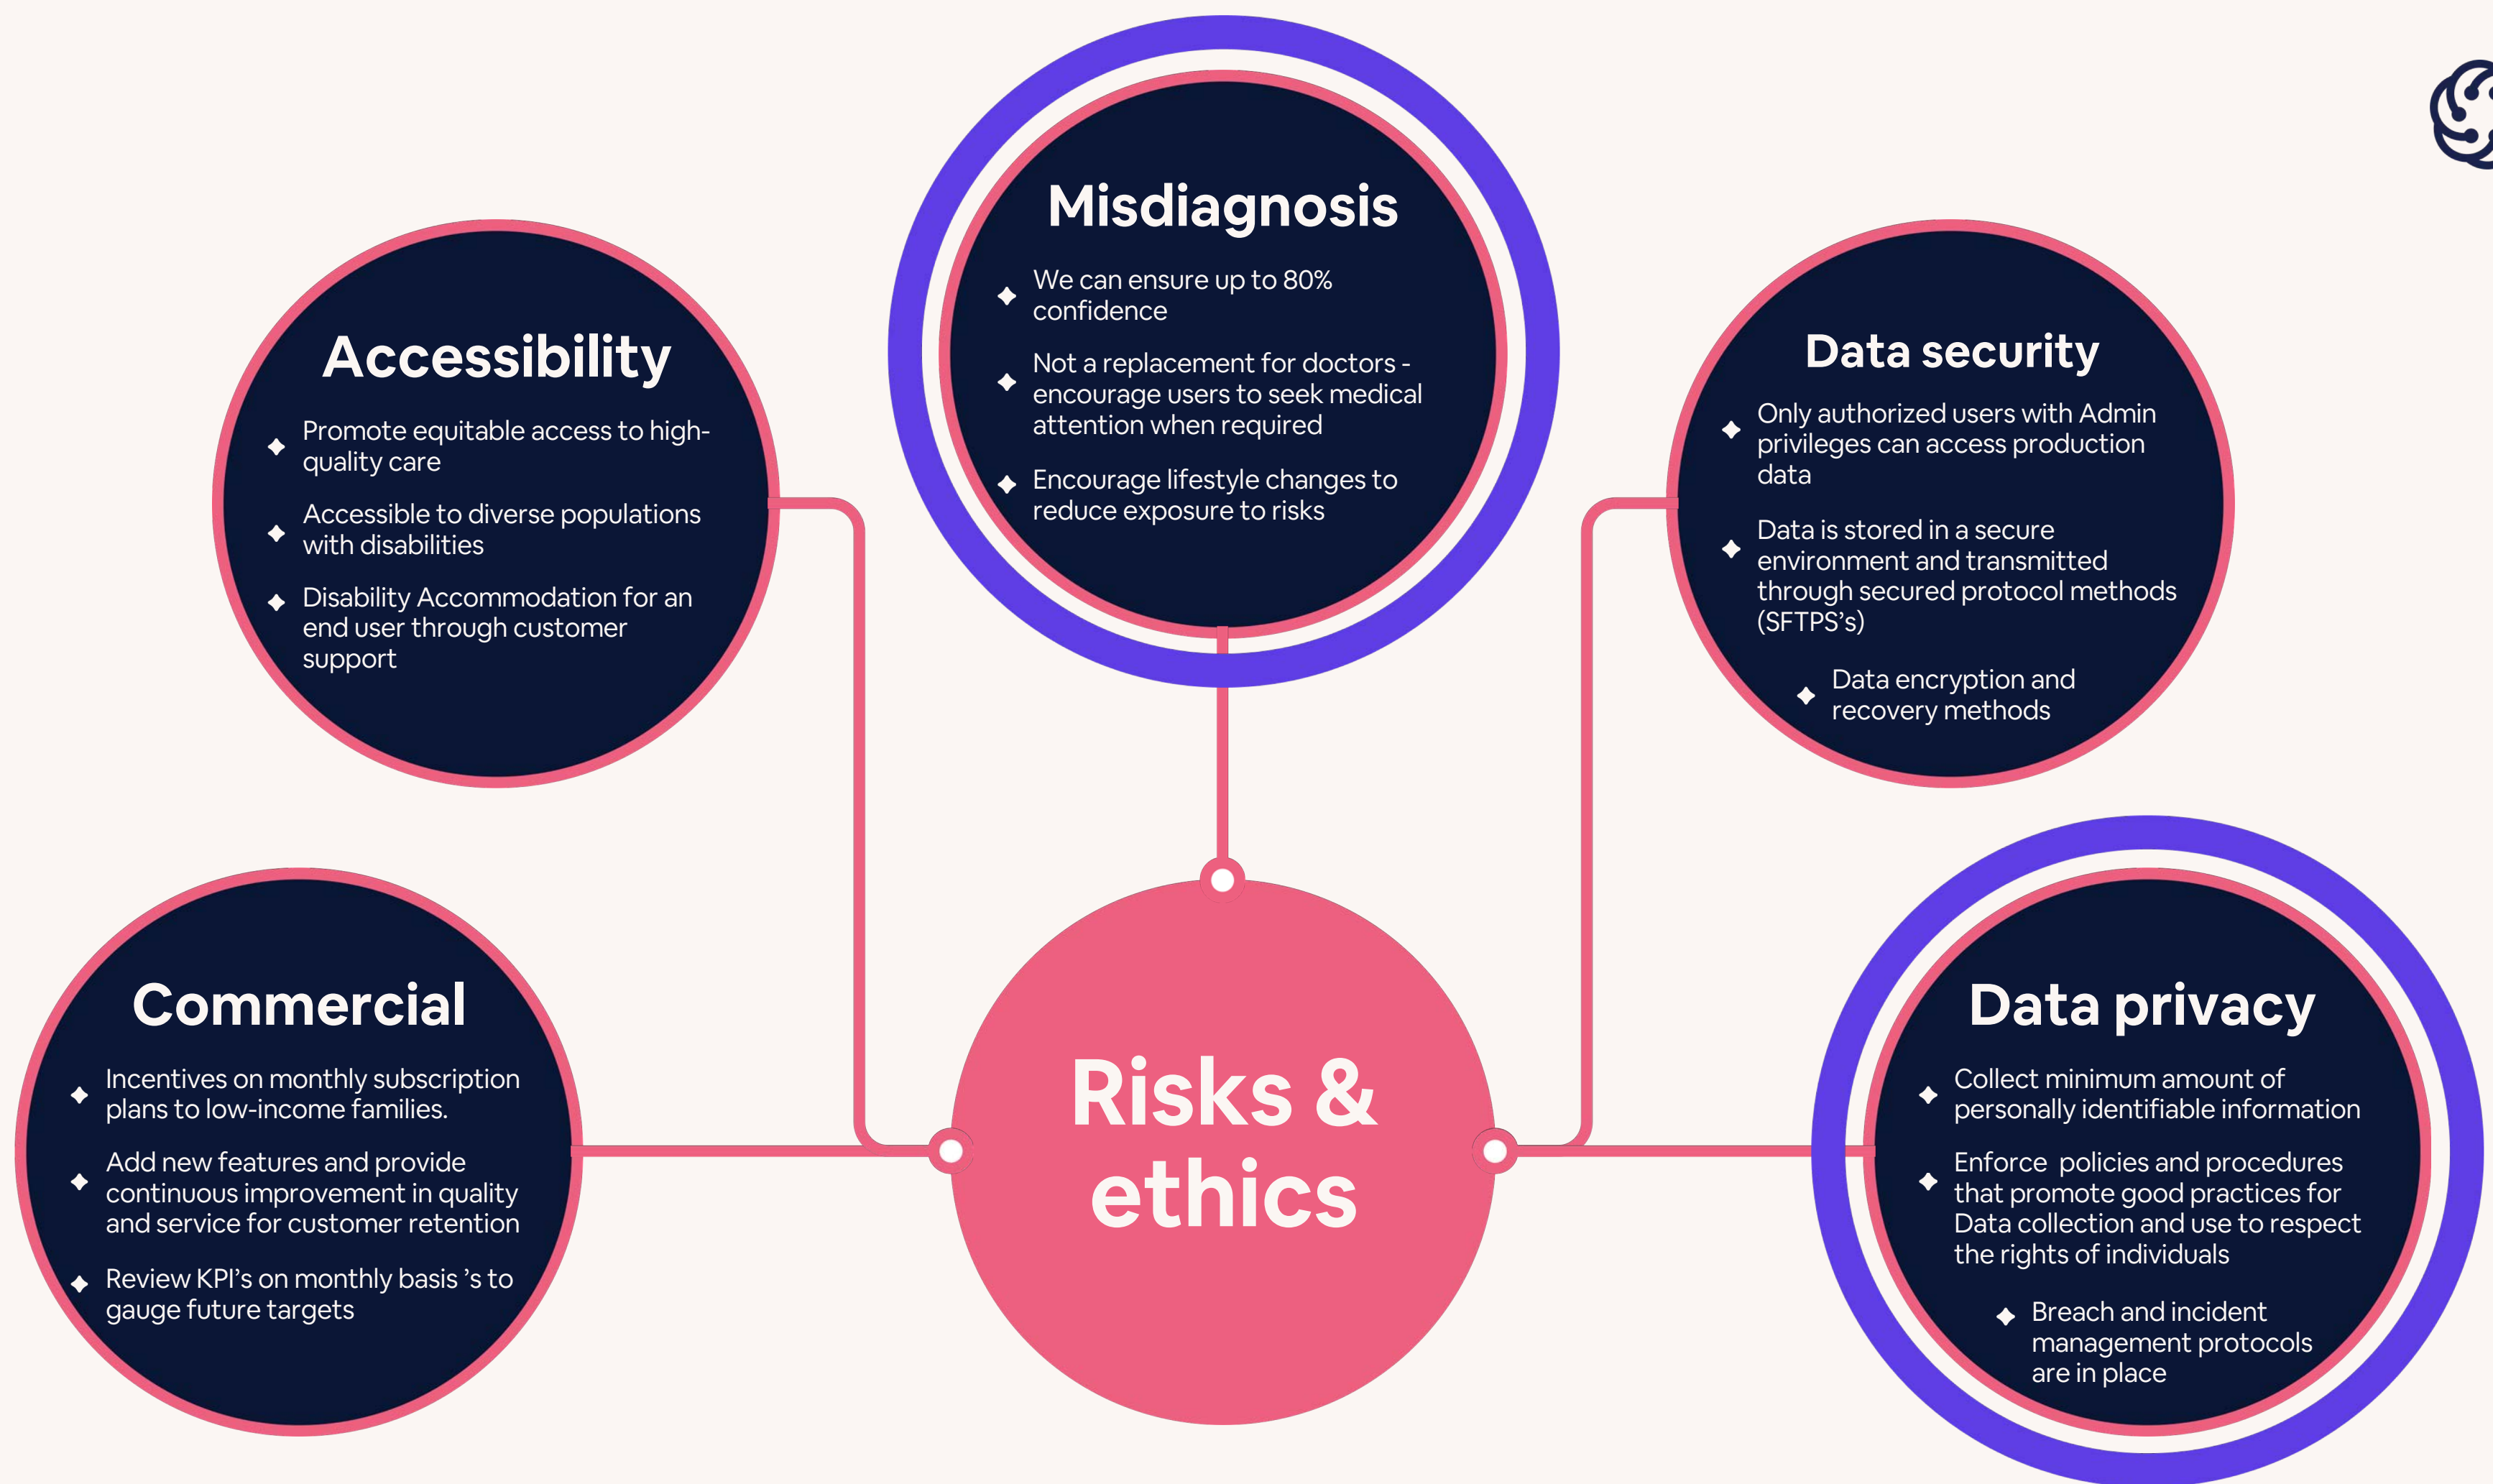

Full scale product

Expansions into NA market & localization

Target date: Q3'2023

- ◆ Gamification: Brain challenges & games to improve cognitive ability
- ◆ Localization of app in French, Spanish and other languages

Impact

Discrimination

These populations reported discrimination when seeking health care:

Awareness

- ◆ 56% of Canadians are concerned about being affected by Alzheimer's disease
- ◆ 46% of Canadians admit they would feel ashamed if they had dementia
- ◆ 87% of caregivers wish that more people understood the realities for caring for someone with Dementia

Reduce burnout & economic burden

- ◆ 30% of people taking care of people with Alzheimer's report mental exhaustion
- ◆ Labor market missed days
- ◆ \$12 Billion in costs today

Lives saved

**4 Million over
10 Years**

Questions?

Appendix

User persona

Sarah Hall

Age: 50+

Work: Director of Communications

Family: Married, 2 Kids

Location: Toronto, Ontario

GOALS & NEEDS

- She needs something that allows her to monitor and improve her health that isn't too time consuming or hard to use
- Her goal is to identify any changes that she can make in her lifestyle in order to continue living a life without Alzheimer's. She wants to enjoy the latter years of her life with her husband, children, and grandchildren without being a burden.

HESITATIONS & PAIN POINTS

- Is hesitant about the potential of being told what to do by an app
- She's not overly tech saavy and fears using an app that is complex and difficult to use
- She doesn't want to spend countless hours visiting her doctor or being sent to multiple specialists

BIO

Sarah, a highly sought-after communications professional is nearing the end of her professional career and looking forward to retirement. Throughout her life she has tried to maintain a healthy lifestyle, but the demands of her career, as well as her family have often come at the sacrifice of her own self-care.

She's looking to take more control of her cognitive health especially considering that she will have much more free time after she retires. She has always been action-oriented and feels like she needs tangible next steps that she can easily implement in her life. She doesn't want to spend too much time using technology, as she sometimes struggles and can get easily frustrated.

MOTIVATIONS

Maintaining her health

Changing her lifestyle

Being able to live a quality life

Not being a burden on her family

PERSONALITY

Introvert Extrovert

Sensing Intuition

Thinking Feeling

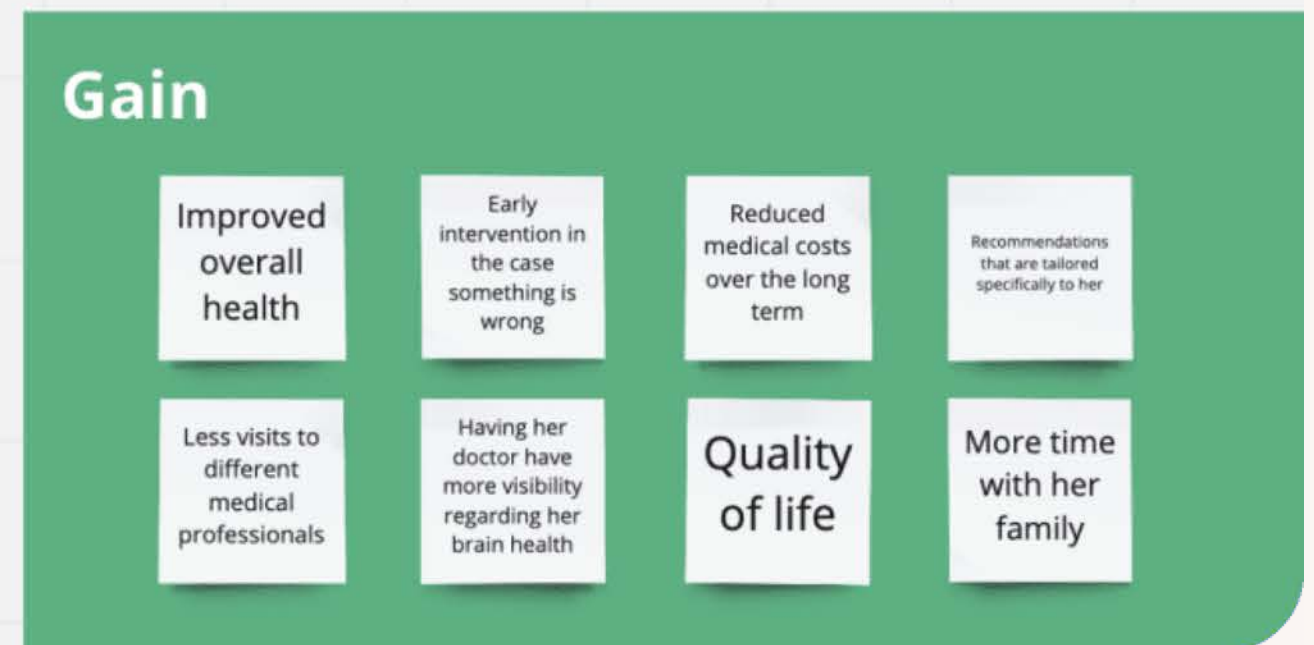

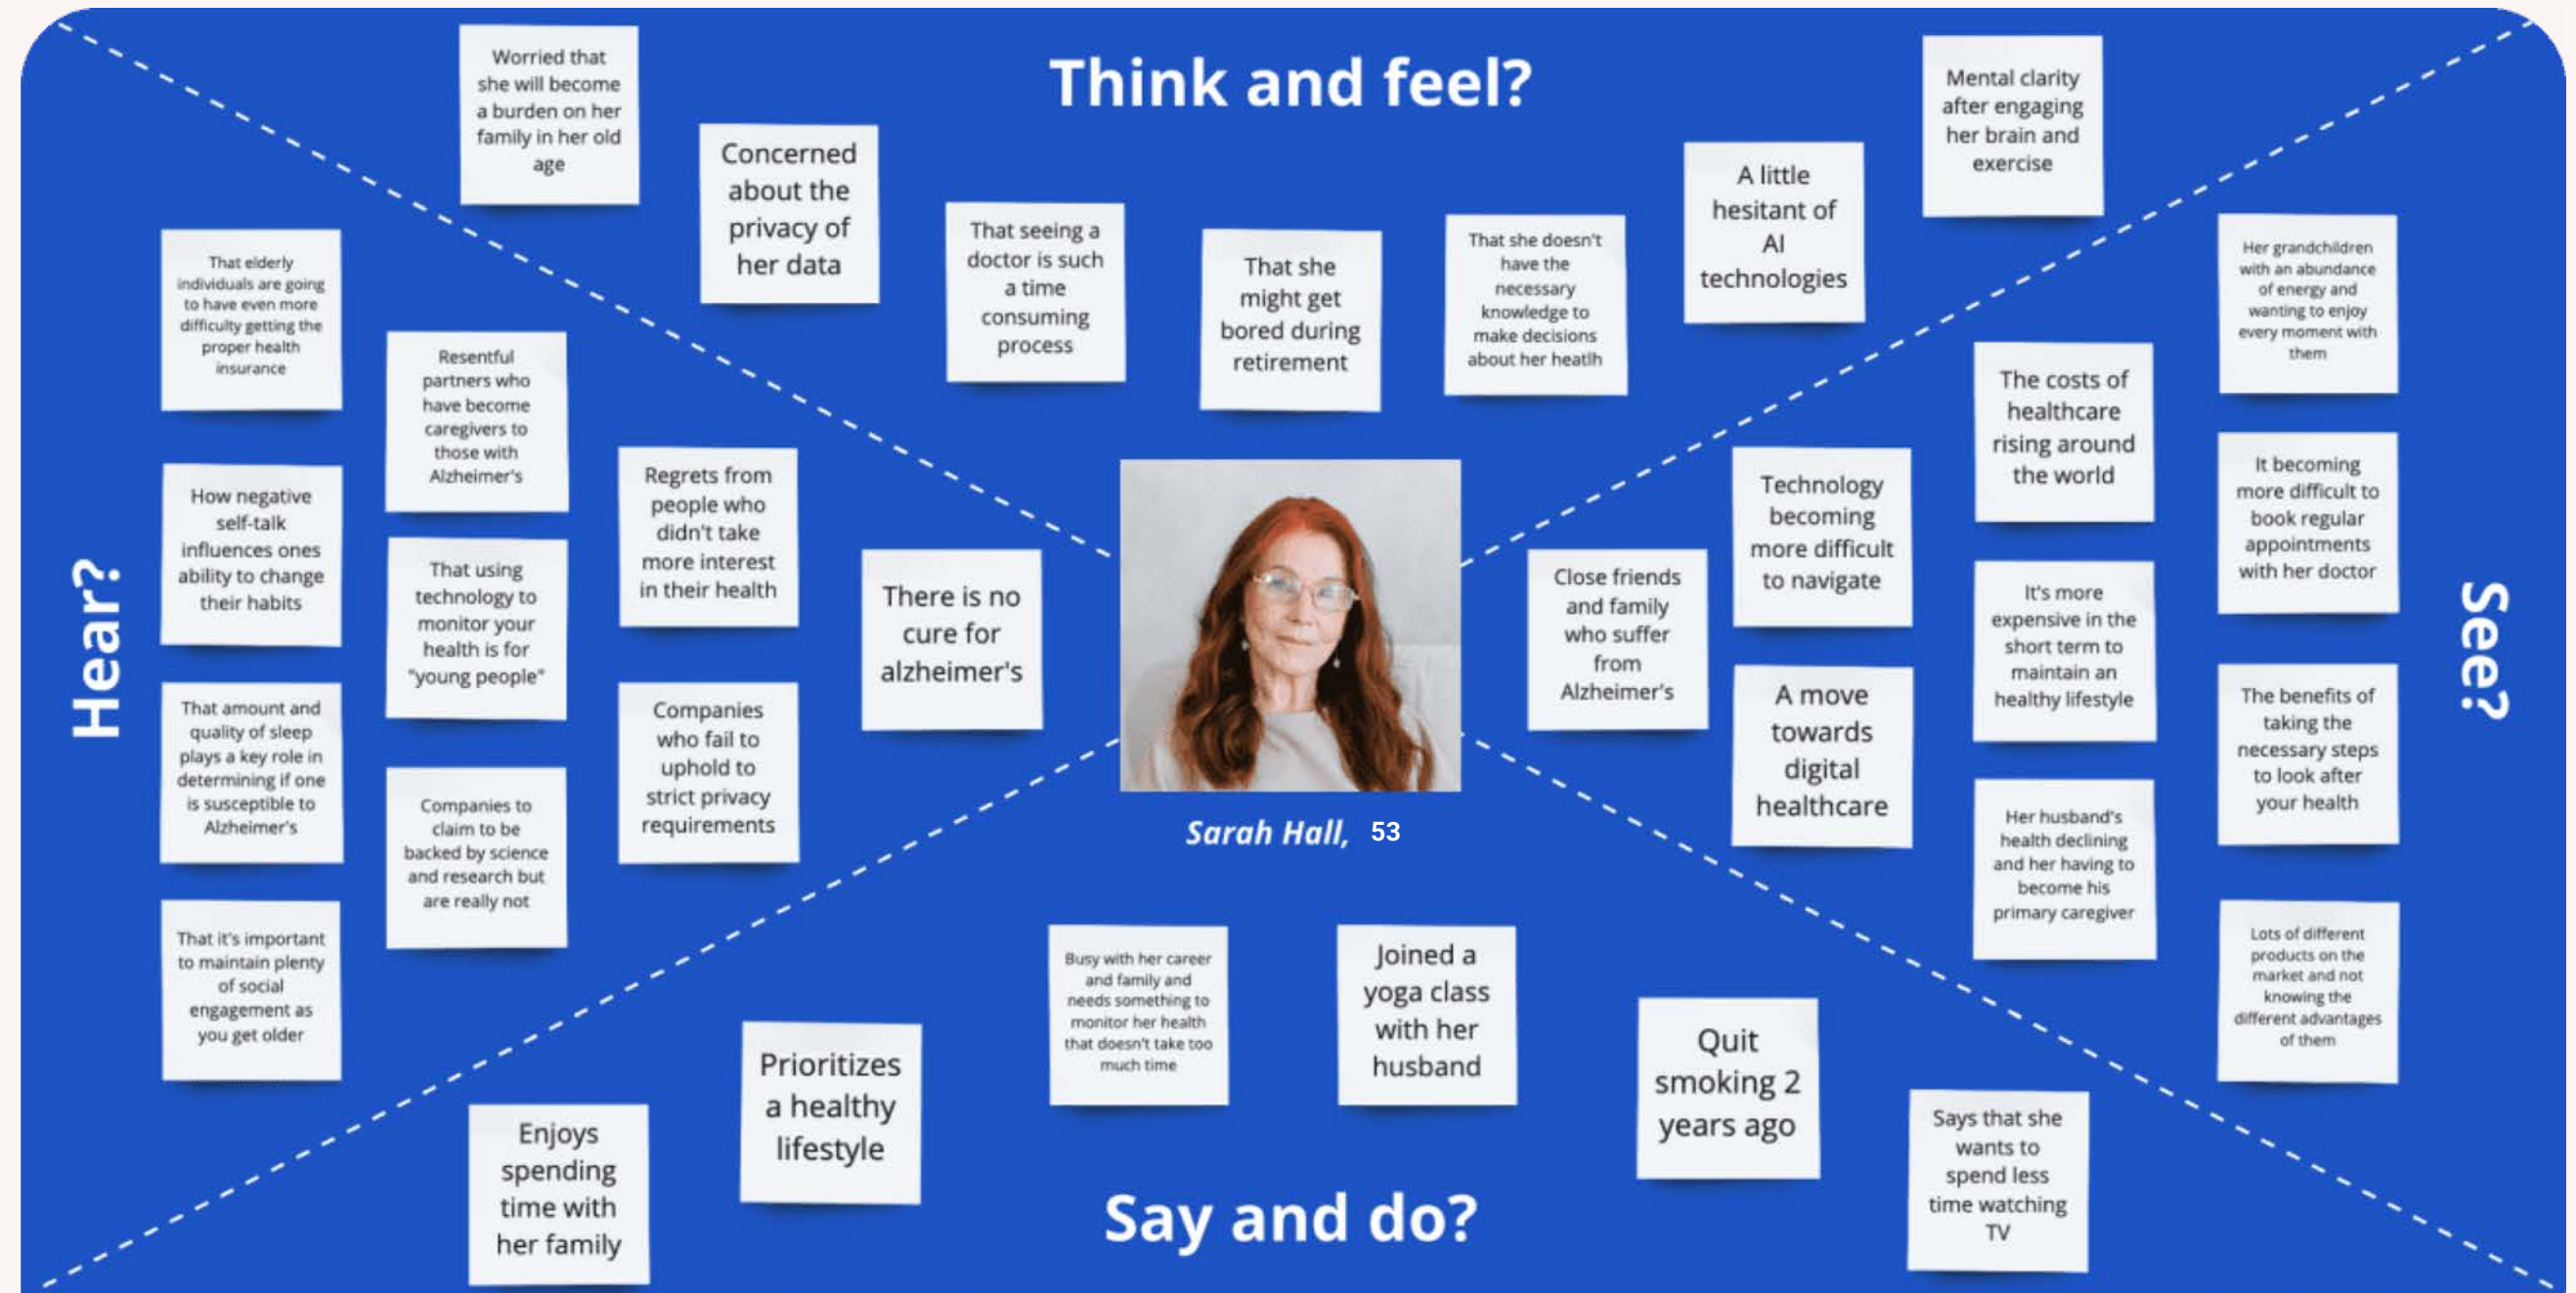

Judging Perceiving
